

INVESTOR

To investors with the interest in buying my property, or finance my project or even seeking for a partnership, please read below what I will describe in a few sentences (which is very difficult to me...) my plans and projects for the Amazon environmental preservation and recovery... It is well known there are “parasites” ready to copy somebody else’s ideas, plans and projects in order to use them as theirs. Since I do not have yet the necessary capital for my project implementation, therefore I need to be very careful with what I say and how I say about it. I believe the “law of attraction” also works for what you think and send to the universe, in order to answer to others... For that, I need to find a partner, an investor or a buyer of my property in order to generate **US\$1,800,000.000** (One million and eight hundred thousand dollars).

I am a son of a humble family, born at a country side in Brazil, at the Mato Grosso do Sul state. I am a father of four men which I am proud of the education I was being able to provide to them. Never, my family and I had the necessary capital to apply to any of my enterprises. All I owned or accomplished in my life was the result of hard work, followed by countless hours of study and dedication.

By the end of seventies I migrated to the capital and, one decade later, my parents followed me. We lived at the same address for more than 20 years and we are very proud with the fact we are respected by the neighbors and recognized as honest people and diligent with our duties and obligations.

Often I am inquired by entrepreneurs about my academic background which, I did not yet have the opportunity to earn it at a university. However, my life shaped and “graduated” me at the “school of hard knots”. This was not an excuse to despise literary studies and daily updates on world news, business and finances. My curiosity led me to be a self learner on these issues.

I worked hard and I believe this is just a tip and a sample of my real destiny towards the humanity and my family.

I am ambitious and I never denied it in my life. However, my ambition is not only focused on money but also on knowledge, respect and professional/social/personal fulfillment.

I could not yet finish a college but this did not stop me to continue to learn and, because of that, I conceived the Amazon Green Club project.

The Amazon Green Club project has several fields. Among them the main ones are:

- International Amazon Green Club (Capitalization company)
- Environmental preservation and protection.
- Recovery of destroyed biomes.
- Recovery and protecting of the rivers.
- Sustainable development
- Industrial fish production
- Industrial production of other animal protein

- Sustainable timber extraction
- Thematic tourism geared towards environmental education
- Aquatic tourism through floating hotels
- Amazon Green Convention Center at São Paulo State - SP
- Amazon Green Convention Center at Amazon State - AM
- Amazon Green Convention Center at Northeast Brazil
- Native Essences Project
- Native Fruits Project
- Bottling and improvement of native fruits pulping
- International Amazon Golf Club
- Industrial fish facilities
- Exporting Company
- Distributor Company
- Forestry Technology and Bioresearch Center

Click at this following link xxxxx in order to learn a little more about my project

The Project

First of all it is necessary to make it clear the capital I need is not for to create and implement all the companies and project mentioned above. With the exception of the first item: the **International Amazon Green Club**, the other will be created with the income from the first one. Therefore, we can assume the **Amazon Green Club** is an **embryonic project** and needs **the necessary capital for its conception and implementation**.

The conception will be only possible after knowing the origin of initial capital: investor, partner or mine (from the selling of my property).

Case the capital comes from an investor, it will be given the option to participate at the decision about the products and services it would be created and the target markets. The decisions will be made based upon the investor/partner's expertise and network.

The Amazon Green Club will be a leisure corporation where individuals and enterprises could join as affiliates with the goal raise funds for the preservation and protection of billions of square meters of natural biomes. The biome square meter will be the exchanged currency. This square meter would worth between US\$2.60 and US\$5.20.

Some products to be created and sold to certain market segments will not have a sales cost. Once the product or service is created a bid process will be in place and offered to companies specialized in each segment. The winner would be chosen based on their management structure, global marketing plan and higher bid combined. A preliminary analysis was made using an initial 20,000 titles with the total value between US\$1,4 million and US\$2,8 million of dollars each. A minimum of US\$25 billion of dollars could be raised at the first Amazon Green Club product. The affiliation fee would vary according to the size and the management positions and services the affiliate desired to own.

Once joined the Amazon Green Club affiliation, the corporations:

- ✓ Will receive a commitment contract for the protection and preservation of the area linked to the document and also would have the marketing rights, utilizing 10 minutes of the area's images.
- ✓ Could utilize – based on the affiliate contract terms – the name of the Amazon Green Club.
- ✓ Each affiliated corporation's director, from any part of the world, would receive a contract and other necessary documents for identification and services solicitation rights worldwide.
- ✓ The director's leisure rights will be extended to their families up to 25 years of age and grandkids up to 7 years, including son and sisters in law.
- ✓ For business trips the director could bring up to 2 companions, properly identified from the headquarters as employees. The travel expenses would be paid by the director's membership card.

With this brief description, it is possible to any visionary investor to have a clear idea about the objectives of the **Amazon Green Club Project**.

The main objective, however is to guarantee, utilizing the environmental laws, the preservation of **more than 5 million of hectares** in Brazil. This could be done only at the Brazilian Amazon state or even distributed between the Pantanal, the Middle East Serrado and the Atlantic Forest.

At the preservation and protected areas, transformed into **Preservation Units (or RPPN, law XXXX)**, tourism, bioresearch and other sustainable activities already mentioned above, are allowed by the Brazilian government.

The tourism potential, without any exaggeration, the 200,000 beds/year goal can be easily reached using our own hotels. Also around 2 million beds could be sold using partnerships with other tourism chains.

Lack of capital is the main challenge of any organization – private or public – when it comes to environmental protection. My project addresses exactly this difficulty by showing concrete steps on how to raise the necessary resources in order to preserve the Amazon Rainforest.
